

WHAT CAN WE DO TO PROTECT OUR PLANET?

Here some thoughts of
students from 1A

Hello everyone, today I will tell you about what my family and I do to protect our planet: with my family we are very careful in turning off the lights so as not to waste electricity, we do separate collection, if on the street we see bottles or other objects we pick them up and put them in the bins, we eat seasonal fruits and vegetables, and, to reduce plastic we use paper objects: straw, paper bags etc., because it is very important for me to protect our planet even with small gestures, because the world is in our hands.

These Summer Fruit + Veg are WAY COOL!

FALL for tasty Autumn Fruit + Veg!

My family and I use the bus, we are very attentive to energy consumption and we separate. To reduce plastic we buy fruit and vegetables from the greengrocer and we never use plastic plates and glasses. We recycle organic, plastic and paper. I think that environmental education is useful for raising awareness of children and young people on global warming.

LORENZO GAROFALO 1A

To protect our planet, my family and I do a separate collection every day. We then divide the waste in the appropriate containers. We make a separate collection for paper, plastic and glass.

To reduce plastic I mainly reuse glass and plastic objects and transform them into objects. For example, a plastic bottle can become an object holder.

I think that environmental education is a way to help humans manage their behaviors adequately because only in this way environmental balances can be achieved.

BROKEN ITEMS INTO NEW TREASURES**

My family and I often go on foot, we use the car only the bare minimum (to go to the swimming pool or to move outside Rome). We do separate collections. We try to consume as little electricity as possible, always turning off the lights when we leave the rooms.

In addition, my parents buy only seasonal fruits and vegetables, and always Italian products; not only because the products exported from abroad pollute the environment, but also because they don't taste good.

To reduce plastic, I never buy plastic bottles, but I always bring my metal bottle with me.

We drink tap water, not bottled water. Some time ago my sister had to drink mineral water, not tap water: instead of taking water from plastic bottles, we used glass bottles.

We recycle all the clothes: all my clothes have always been given to my sister. Then my parents also bought her new clothes, but most of them were mine. Sometimes my sister's clothes are also donated to other poor children.

I think environmental education is very important to teach everyone that the planet must be respected because there is only one. You can't make the most of it! We are destroying it, we are destroying ourselves; because, even if we don't notice it, the planet reacts: natural disasters, climate change and other things are proof of it!

We can't keep throwing plastic into the ocean, or cutting down trees for intensive farming, or making a parking lot out of the Amazon rainforest!

For this, environmental education is fundamental. **BEATRICE RICCIO 1A**
